

PATIENT SERVICES

Our goal is to team up with you to help you achieve dental wellness. We have a friendly office which provides care in a comfortable, modern environment. We strive to keep our fees within usual and customary standards. We work to minimize the visits you have to make to our office to achieve the desired results. We strive to remain on time for your dental appointments by not over scheduling patients.

Dr. Day provides a full range of general dental procedures. He has digital x-rays, nitrous oxide, a panoramic machine for full face x-rays, and a Caris Vu laser which is a radiation-free device used to detect decay, harmful cracks in teeth and other dental issues. We leave appointment times available for same day emergencies and are handicap accessible. We welcome new patients.

We maintain an extensive collection of patient education pamphlets and handouts. We pride ourselves on keeping up to date on everything related to dentistry.

There are some excellent sites to view when you desire to know watch a video on a procedure offered in the dental office. The American Dental Association (ADA) offers important information on the procedures and practices you may encounter in a dental office on their web site. Youtube.com is a secure, free site accessible to you if you are able to go online, which also allows you to type in the name of a procedure so you can view videos on it and related topics. The following links are some of Dr. John Day's more frequently performed dental procedures.
